EGAR Rothera (Antarctica)  
Apt Elev: 13’  
Apt Reference Point: S67 34.0 W068 07.7

Rothera Radio: VHF 118.10 HF 5080, 7775, 9106
Phone +44 1223 221670 or 671 Iridium 881 631 831 219

All Procedures VFR Use Only Not Approved  
Operating Hours: 1100z to 0000z Mon-Sat Oct-Feb. Other times by arrangement all operations require prior permission

See page 2 for Warnings, Notes and Special Procedures.  
Variation 20°E (2018)  
Circuits: Left hand runway 18 / Right hand runway 36 / Alt 1200’

Variation 20°E (2018)

Chart NOT to Scale

Avoid over flight of local islands and all wildlife below 2000 feet asl, except when established on the final approach track to either runway.

Co-ordinates:

Rwy 18 Threshold S67 33.83 W068 07.40,  
Rwy 36 Threshold S67 34.27 W068 07.85

Takeoff

Rwy 36: 1100 feet Cloud Ceiling and Visibility 3000m  
Rwy 18: 1500 feet Cloud Ceiling and Visibility 5000m

*RWY 18/36 MIRL require 1 Hour notice to deploy
**Warnings:**

1. Weather balloons, rockets and UAV activity; contact Rothera Operations and consult the latest NOTAMs published on the AIS NOTAM system.
2. Rothera runway is **NOT** available during BAS DASH 7 Point of Safe Return (PSR) Operations. Aircraft captains must contact Rothera Operations by phone before departure on the day of intended flight for details.
3. Possible icebergs maximum 300 feet on the approach to both runways.
4. Severe turbulence and windshear on short finals to runway 36 & 18 associated with easterly winds greater than 10 kts.
5. Bird hazard in the vicinity of Rothera airfield November to April.
6. Occasional ships moored at the wharf to the East of Rwy 36 threshold. Ships moored at the Rothera wharf may necessitate runway closure, contact Rothera Operations.
7. Steeply rising ground to the West, circuits to the East only, circuit height 1200 feet.
8. Multiple aerial arrays to the east of the runway up to 250 feet amsl.
9. Avoid overflying all local islands and all wildlife below 2000 feet except when established on the final approach track to either runway.

**Notes:**

1. Fuel: JET A1 available by prior permission only.
2. Runway marked with 205 lt drums and end flags.
3. Snow banks likely maximum 3m September to January contact Rothera Operations.
4. Portable runway lights (MIRL) require 30 minutes notice to deploy.
5. Inbound aircraft to call at 5nm final.
6. For current Rothera chart status and Visiting Aircraft Information consult: [https://www.bas.ac.uk/polar-operations/sites-and-facilities/aircraft/pilots/](https://www.bas.ac.uk/polar-operations/sites-and-facilities/aircraft/pilots/)

**Special Operational Procedures:**

**BAS DASH 7 Point of Safe Return (PSR) Procedures** (NOT applicable to Rothera Skiway)

BAS procedures require a sterile runway and airspace at Rothera for all periods where the BAS DASH 7 has passed PSR until it has landed. Aircraft will NOT be allowed to takeoff, land, hold in the overhead or the vicinity of the airfield during this period. Therefore it is mandatory for visiting aircraft captains to contact Rothera Operations before takeoff. It is the sole responsibility of the aircraft captain to establish the airfield status, gain final authorisation and ensure the flight is planned to avoid times where the airfield is unavailable. If a captain becomes aware the ETA may conflict with a planned DASH 7 PSR period, or other restriction, they must inform Rothera Ops as soon as possible. Failure to adhere to these requirements may result in refusal to use the airfield and the aircraft will be directed to divert or return to the point of departure. This requirement does NOT affect aircraft able to use the skiway when conditions are suitable for its use.

**NOTE**
1. Climb on runway heading to 800°, turn left at ROT04 and left at ROT05 to intercept 360° M track to R0210 climbing to be at or above 2500 by R0210. At R0210 continue to track 360° to IAPAS climbing to be at or above 6000 by ROT26 and at or above 8000 by IAPAS. From IAPAS track direct to either G1 or 6666, continuing climb to be at or above 11000.
2. All tracks are magnetic.
3. Weather minima: 1100ft cloud ceiling, 3000m visibility
4. In the event of an engine failure before reaching 1100ft remain VMC and return to EGAR. If single engine failure occurs IMC before R0210 continue with procedure to be at R0210 at or above 2500 then turn RIGHT to RMATF to join EGAR SB approach not below 3000.
5. Expect severe turbulence and mountain wave activity in strong wind conditions.
6. Use course guidance from RNAV, ensure that RAIM is available throughout, and set the CDI sensitivity to the most accurate setting available until at least 11000ft.
7. Minimum climb gradient is 5.0% until 800° thereafter climb at minimum 3.7% using table provided to calculate rates of climb according to groundspeed.
8. Max 160kt until established on 360° M track to R0210.

NOTE 1. Climb on runway heading to 413, then turn right to intercept 022°M track to R2210 climbing to be at or above 2500 by R2210. At
R2210 turn left to track 360° to IPASS climbing to be at or above 6000 by R0726 and at or above 8000 by IPASS. From IPASS
tack direct to either G1 or 6666, continuing climb to be at or above 11000.

2. All tracks are magnetic

3. Weather minima: 11000 ft cloud ceiling, 3000m visibility

4. In the event of an engine failure before reaching 11000 ft remain VMC and return to EGAR. If engine failure occurs IMC before R2210
continue with procedure to be at R2210 or above 2500 then turn right to RMAF to join EGAR 30 approach not below 3300.

5. Expect severe turbulence and mountain wave activity in strong wind conditions

6. Use course guidance from RNAV, ensure that RAIM is available throughout, and set the CDI sensitivity to the most accurate
setting available until at least 11000 ft.

7. Minimum climb gradient is 6.31% until 750° thereafter climb at minimum 3.7% using table provided to calculate rates of
climb according to groundspeed.

8. Max. 130kt until established on 022°M track to R2210.

British Antarctic Survey & Osprey / gCAP Ltd  01 February 2019
EGAR Rothera (Antarctica) 36 (Mag) RNAV (GNSS)

PROCEDURE NOT FLIGHT CHECKED USE AT PILOTS OWN RISK

TURN RIGHT IMMEDIATELY CLIMBING TO MIN 3300 AND TRACK 091°M TO RMATF. MAX 130KIAS UNTIL RMATF. CONTINUE TO REAST TO HOLD.

NOTE 1: TAA: South (RIAF) join from 271°M to 070°M within 10NM, North (RMATF) join from 091°M to 271°M within 10NM

2. RMATF is a fly-over WP. In the event of a go-around, turn right without delay and intercept 091°M track to RMATF

3. Ensure CDI sensitivity is 0.3NM by RIF and RAIM is available

4. Procedure not approved - not flight checked. Operators fly this procedure at their own risk

5. Nominal final gradient is 5.26%. See RoD (rpm) or g's (kt) for RIF to RMAP, gradients appropriate to MDA

6. Multiple Masts (Unlit) up to 250ft AMSL approx 350m East of Runway

7. Caution: Icebergs up to approximately 300ft on approach

Operating hours: On request.

**Warning:**

1. Daily weather balloons, and/or UAV activity; contact Rothera Operations and consult the latest BAS NOTAMS.
2. **Severe turbulence** can be expected on the approach to skiway 02 and in all direction with winds greater that 15kts.
3. Approach to skiway 02 is over steeply rising ground.
4. Skiway marked with 205 lt drums, land to the south of the drum line.

**Cautions:**

1. Steeply rising ground to the west and South of the skiway.
2. Unprepared skiway.

**Notes:**

1. Fuel Jet A1 available by prior arrangement only.
2. All aircraft require Prior Permission.
3. Access to the skiway from Rothera Base may be restricted January to March due to snow conditions.

**02 Threshold** Approximately S67 32.400 W068 11.954 Elev 825’.

**20 Threshold** Approximately S67 31.354 W068 09.957 Elev 828’.

**02 & 20** Takeoff/Landing distance approximately 8000 feet– Surface type: Snow.
